EPD typeCradle to grave A1 to C4 + DIssue Date30 Nov 2024Range NamePorcelanosa Ceramic TileValid Until30 Nov 2029

Product Name Floor Tiles

EPD Number EAR022024EP

#### **Demonstration of Verification**

Communication	and independent external verification of this declaration and data <sup>a</sup> ensures it is fit for business-to-consumer communication. [1]
Comparability	Different program EPDs may not be comparable. Comparability is further dependent on the product category rules and data source used.
Reliability	LCIA results are relative expressions that do not predict impacts on category endpoints, exceeding of thresholds, safety margins or risks.

Objectives

To show improved, net-zero, net-positive and regenerative results and timely imperatives to secure viable climate and biodiversity on earth against a background of increasing disasters attributable to anthropogenic climate change.

## **Data Sources**

**Cradle to Grave** 

C<sub>2</sub>Gate+Options M M

Fate C<sub>2</sub>F & beyond system to Cradle (C<sub>2</sub>C)

C<sub>2</sub>F

Primary Data	Data is from primary sources 2018 to 2023 including manufacturer and supplier standards, logistics, technology, market share and management system in accordance with EN ISO 14044:2006, 4.3.2. All are physically allocated not economically allocated.
A1-A3 Stage inclusions	Operations include all known raw material acquisition, refining and processing plus scrap or material reuse from prior systems; electricity generated from all sources with extraction, refining & transport plus secondary fuel energy and recovery processes. Also, transport to factory gate; manufacture of inputs, ancillary material, product, packaging, maintenance, replacement plus flows leaving at end-of-waste boundary and
Variability	Significant differences of average LCIA results are declared.
Chemicals of	Contains no substances in the European Chemicals Agency "Authorised or Candidate
Concern	Lists of Substances of Very High Concern (SVHCs)".

# **LCA Data Quality**

Data quality parameters are tabled below. Data was <10 years, cut-off & quality complies with ISO14025. [1]

10011020.							
Background	<b>Data Quality</b>	Parameters and Uncertainty (U)					
Correlation	Metric σg	U ±0.01	U ±0.05	U ±0.10	U ±0.20

#### **System Scope and Boundaries**

Figure 2. shows included processes in a cradle to grave system boundary to end of life fates reuse, recycling, or landfill grave.

Stages A1 to 3 model actual operations to acquire, refine, transport, fabricate, coat, use, clean, repair, reuse and dispose of metal, masonry, ceramic, timber, glass, plastic and composites.

Stage A4 to C4 are modelled on typical scenarios to forecast operations including those of:

- Mining, extracting and refining resources to make commodities and packaging;
- Acquiring, cultivating, harvesting, extracting, refining produce and biomass;
- Fuel production to supply power and process energy and freight;
- Chemicals use in processing resources, intermediates and ancillaries;
- Process energy, fuel and freight of resources, intermediates and ancillaries;
- Use, cleaning, recoating, repair, recycling, re-use and landfill, as well as
- Infrastructure process energy transformed and material wear loss e.g. tyres.

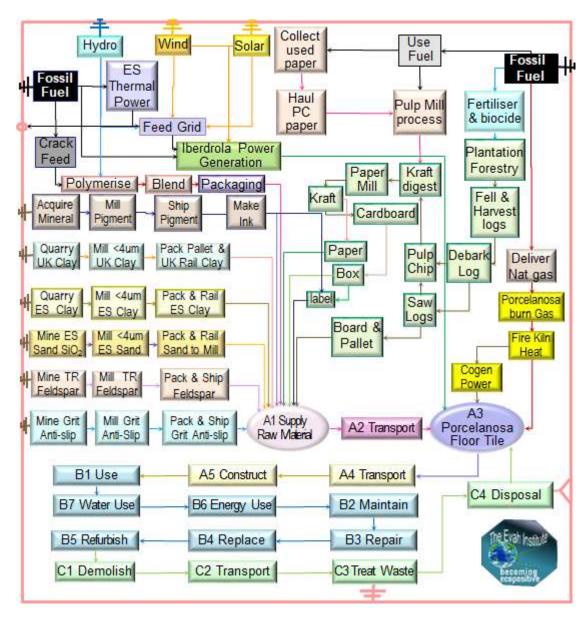

Figure 2. Product Process Flow Chart

EARP BROS PORCELANOSA

**Porcelain Floor Tile** 

#### **Details of Manufacturer**

Earp Bros Tiles, a distributor of premium ceramic tiles in Australasia, is committed to decreasing their environmental impact. Testing ensures materials are used to their potential, along with accelerated wear assessment. Slip resistance is a key focus for improving occupational health and safety.

They support low impact tiles, facilitate scrap re-use in road base and relocated their warehousing to use rail not road. They import from companies committed to international practice in sustainable manufacturing sources such as Porcelanosa Group.

Porcelanosa tiles are used for interior applications in commercial and residential sectors. Porcelanosa is committed to quality, innovation and the environment with strict testing and quality controls. Their manufacturing is certified to ISO 14001 in Environmental Management and ISO 9001 in Quality Management.

Heat from natural gas fired kilns is used in spray driers and boilers powering turbines to cogenerate electricity for use in the Porcelanosa tile factory at Castellón in Spain. Also, tiles are delivered in recyclable cardboard packaging and are fully recyclable at the end of life.

### **Product Information**

This section provides data required to calculate assessment results factoring different mass and periods.

Range Names	Porcelanosa Floor Tile
Brand Name & Code	Bla and Blb series Floor Tile
Factory warranty	Fit for purpose use, 10 years only
Manufacturer	Porcelanosa S.A. U
Factory address	P.O. Box: 131, 12540 Vila-real, Castellón, Spain.
Site representation	Made in Spain. Uses are assumed as for Australasia.
Time	Made and sold in 2024 for single use
Application	Commercial, Residential, Industrial building in-/exterior wet/dry area tiling
Function	Interior and exterior wet and dry area floor covering
Lifetime	Residential and commercial refits vary but 60 year life is assumed typical.
Declared unit	Porcelanosa Bia and Blb series floor tile 19.2kg/m² coverage
Functional unit	Declared product at given coverage per kg 60-year use cradle to grave

# Whole of life Health Safety & Environment Performance

This section provides qualitative information on Health Safety & Environment whole of life performance.

Environmental Health Effects	No potential in-use impacts on environment or health are known.
Health Safety & Environment	Apart from compliance to occupational and workplace health safety and environmental laws no additional personal protection is considered essential for manufacture, use or reuse.
Health Protection	The product does not contain levels of carcinogenic, toxic or hazardous substances that warrant ecological or human health concern cradle to grave. It passed the Eco specifier Cautionary Assessment Process (ESCAP) and no issues or red-light concerns existed for product human or ecological toxicity.
Environmental Protection	Continuous improvement under the maker's uncertified management system avoids toxics, waste and pollution plus reduce their material and energy use.

## **Product Components**

This section summarises factory components, packaging functions, source nation and % mass share.

# **Base Material Origin and Detail**

This section lists Porcelanosa key components by function, type, sources and % mass share.

Function	Component	Source	Amount%
Ceramic	Clay	Spain	>25 <26
Ceramic	Clay	United Kingdom	>15 <17
Flux	Feldspar	Turkey	>43<45
Home Scrap	Clay, Sand and Feldspar	Spain	>6.0 >6.5
Coalescent	Sand	Spain	>7.5 <8.5
Flow additives	Confidential	Global	>0.1 <0.2
Function	Component	Source	Amount%
Pallet & crate	Wood	EU	>3.0 <4.0
Spacers & Carton	Cardboard	EU	>1.5 <2.5
Strapping	Polypropylene	EU	>1.0 <2.0
Wrap, plate, sling etc	Polyethylene	EU	>0.3 <0.4

#### **Product Functional & Technical Performance Information**

This section provides manufacturer specifications and additional information.

Applicable Standards	
ISO 14001	Covers the whole process, from design through to sales of end products.
ISO 50001	Reduce energy consumption and minimize greenhouse gas emissions
Length*Width (mm)	Varied formats and dimensions

#### Whole of life Performance

This section provides qualitative information on whole of life performance.

Material quality	>95% PEFC and Global GreenTag International certified sustainable lumber.
Finishes	Various non-slip finishes
Effluent	LCI results and ESCAP raised no red-light concerns in emissions to water <sup>1</sup> .
Waste	Cradle to grave waste to landfill was non-hazardous.
Standard Reference	https://porcelanosa.com/
Practices Reference	https://porcelanosa.com/
Disposal	It assumes 30% is recycled.

<sup>1</sup> According with national standards in ANZECC Guideline For Fresh & Marine Water Quality (2000)

# **Scenarios Descriptions**

This section defines modelling stages scenarios A4 to D3 beyond actual operations in module A1 to A3.

Module	Type specified	Amount Type specified		Amount	
Construct					
	Sea Shipping	13,000	85% Capacity	Full back load	
A4 Transport factory to depot then to site	Interstate Rail	1,300 km	85% Capacity	Full back load	
2	25t semi-trailer	200 km	85% Capacity	No back load	
A5 Install	VOCs indoors	0%	Packaging & Waste	0%	
Building Modules					
B1 Use	VOCs	0%	No other flows	0%	
B2 Maintain	fit for purpose	100%	fit for purpose	0%	
B3 Repair	fit for purpose	95%	Repair damaged Repaint 8 yearly	5% 100%	
B4 Replace	fit for purpose	100%	No other flows	0%	
B5 Refurbish	fit for purpose	100%	fit for purpose	100%	
B6 Energy use	off grid	100%	Solar and wind energy	100%	
B7 Water use	off grid	100%	Rain and dew	100%	
End of Life Modules					
C1 Demolish	fit for purpose	100%	No other flows	0%	
C2 Transport	fit for purpose	100%	No other flows	0%	
C4 Disposal	fit for purpose	100%	No other flows	0%	
Beyond System Boundar	ry Modules				
D1 Reuse	fit for purpose	75%	No other flows	0%	
D2 Recover	fit for purpose	22.5%	No other flows	0%	
D3 Recycle	fit for purpose	2.5%	No other flows	0%	

# **Environmental Impact Terminology**

Environmental impacts contributing to risks of social and ecological issues and collapse are tabled below with common names and remedies given for each indicator.

Global warming forcing Climate Change	Greenhouse gases absorb infra-red radiation. This heat reduces thermal energy differentials, from equator to poles, forcing ocean current and wind circulation to blend and regulate climate. Weakly blended "lumpier" weather has more frequent, extreme heat wave, fire-storm, cyclone, rain-storm, flood and blizzard events. Accumulation of carbon dioxide, natural gas methane, nitrous oxides and volatile organic compounds from burning fossil fuels causes global warming. Forest and wilderness growth absorbing air-borne carbon in biomass can drawdown such accumulation. Urgent renewable energy reliance is vital in time to avoid imminent tipping points and the worsening "climate emergency".
Ozone layer depletion	Stratospheric ozone loss weakens the planet's solar shield so more shorter wavelength ultraviolet (UVB) light reaching earth damages plants and increases malignant melanoma and skin cancer in humans and animals. Chlorofluorocarbons, hydrochlorofluorocarbons (HCFC), chlorobromomethane, hydrobromofluorocarbons, carbon tetrachloride, methyl chloroform, methyl bromide and halon gas cause ozone layer loss. To repair the "ozone hole" reliance on ozone-safe refrigerants, aerosols and solvents is essential to avoid further its depletion and enable accumulation of naturally-formed ozone.
Acidification	Acidification reduces soil and waterway pH, impedes nitrogen fixation vital for plant growth and inhibits natural decomposition. It increases rates and incidence of fish kills, forest loss and deterioration of buildings and materials. Chief synthetic causes of "acid rain" are emissions of sulphur and nitrogen oxides, hydrochloric and hydrofluoric acids and ammonia from burning fossil fuels polluting precipitation of rain and snow world-wide.
Eutrophication of terrestrial, freshwater and marine life	Eutrophication from excessively high macronutrient levels added to natural waters promotes excessive plant growth that severely reduces oxygen, water and habitat security for aquatic and terrestrial organisms across related ecosystems. Chief synthetic cause of " <b>algal blooms</b> " is nitrogen (N, NOx, NH <sub>4</sub> ) and phosphorus (P, $PO_4^{3-}$ ) in rain run-off over-fertilised land catchments.
Photochemical ozone creation	Tropospheric photochemical ozone, called " <b>summer smog</b> " near ground level, is created from natural and synthetic compounds in UV sunlight. Low concentration smog damages vegetation and crops. High concentration smog is hazardous to human health. Chief synthetic causes are nitrogen oxides, carbon monoxide and volatile organic compounds (VOC) pollutants. Avoiding reliance on dirtiest coal fuel and volatile chemicals has reduced smog incidence in many areas globally.
Depletion of minerals, metals & water	Abiotic depletion of finite mineral resources increases time, effort and money required to obtain more resources to the point of extinction of naturally viable reserves. This can limit access to available, valuable and scarce elements vital for human-life. The youth movement "extinction rebellion" calls on adults to secure climate, reserves and biodiversity for current and future generations.
Depletion of fossil fuel reserves	Abiotic depletion of resources by consuming finite oil, natural gas, coal and yellowcake fossil fuel reserves leaves current and future generations suffering limited available, accessible, plentiful, essential valuable as well as scarce raw material, medicinal, chemical, feedstock and fuel stock. Approaching "peak oil" acknowledged fossil fuel reserves are finite and the need for decision-makers to act to avoid market instability, insecurity and or oil and gas wars.

# **Inventory and Damage Impact Result Categories, Units and References to Methods**

 $This \ section \ summarises \ impact \ and \ inventory \ result \ units \ with \ descriptions \ and \ references \ to \ methods.$ 

# **Impact & Inventory Results/Functional Unit**

Popult	1111	Unito	Description of Methods
Result	CWD	Units	Description of Methods
Climate Change biogenic	GWP BIO	kg CO <sub>2eq</sub>	GWP sequestered from air [4]
Climate Change Iuluc	GWP LULUC	kg CO <sub>2eq</sub>	GWP land use & change (luluc) [4]
Climate Change fossil	GWP <sub>FF</sub>	kg CO <sub>2eq</sub>	GWP fossil fuels [4]
Climate Change total	GWP TOTAL	kg CO <sub>2eq</sub>	Global Warming Potential [4]
Stratospheric Ozone Depletion	ODP	kg CFC <sub>11e</sub>	Stratospheric Ozone Loss [5]
Photochemical Ozone Creation	POCP	kg NVOC	<sub>e</sub> Summer Smog [6]
Acidification Potential	AP	mol H <sup>+</sup> <sub>eq</sub>	Accumulated Exceedance [7]
Eutrophication Freshwater	EPFRESH	$kg P_{eq}$	Excess freshwater nutrients [8]
<b>Eutrophication Marine</b>	EP MARINE	$kg\ N_{eq}$	Excess marine nutrients [9]
<b>Eutrophication Terrestrial</b>	EPLAND	$mol\ N_{\ eq}$	Excess nutrients to land [8]
Fossil Depletion	ADP MIN	$kg~Sb_{eq}$	Abiotic Depletion minerals [9]
Mineral and Metal Depletion	ADP FF	$MJ_{ncv}$	Abiotic Depletion fossil fuel [10]
Water Scarcity Depletion	WDP	$m^3 {\sf WDP} {\sf eq}$	Water Deprivation Scarcity [11,12]
Input flows	Input		
Net Fresh Water Use	FW	$m^3$	Lake, river, well & town water
Secondary Material	SM	kg	Post-consumer recycled (PCR)
Secondary Renewable Energy Use	RSF	$MJ_{ncv}$	PCR biomass burnt
Secondary Fossil Energy Use	NRSF	$MJ_{ncv}$	PCR fossil-fuels burnt
Primary Renewable Feedstock Material	PERM	$MJ_{ncv}$	Biomass retained material
Primary Renewable Energy Used	PERE	$MJ_{ncv}$	Biomass fuels burnt
Total Primary Renewable Energy	PERT	$MJ_{ncv}$	Biomass burnt + retained
Primary Fossil Feedstock Material	PENRM	MJ ncv	Fossil feedstock retained
Primary Fossil Energy Use	PENRE	MJ ncv	fossil-fuel used or burnt
Total Primary Fossil Energy Use	PENRT	$MJ_{ncv}$	Fossil feedstock & fuel use
Output flows	Output		
Hazardous Waste Disposed	HWD	kg	Reprocessed to contain risks
Non-hazardous Waste Disposed	NHWD	kg	Municipal landfill facility waste
Radioactive Waste Disposed	RWD	kg	Most ex nuclear power stations
Components For Reuse	CRU	kg	Product scrap for reuse as is
Material For Recycling	MFR	kg	Factory scrap to remanufacture
Material For Energy Recovery	MFE	kg	Factory scrap use as fuel
Exported Energy Electrical	EEE	MJ ncv	Uncommon for building products
Exported Energy Thermal	EET	$MJ_{ncv}$	Uncommon for building products

# Results Cradel to Grave within the System Boundary

Table 1 lists A1 Resources, A2 Transport, A3 Manufacture, A4 Delivery, A5 Construct, B2 Maintain, B3 Repair, B4 Replace, B5 Refurb, C1 Demolish, C2 Transport and C4 Disposal results. Modules B1 Use, B4 Replace, B5 Refurbish, B6 Water use, B7 energy use or C3 Processing waste had no flows or result.

#### **Life Cycle Assessment Method**

LCA Author
The Evah Institute is described at <a href="www.evah.com.au">www.evah.com.au</a>.

Study Period
Factory data was collected from 2021 to 2023.

Compliant with ISO 14040 and ISO 14044 Standards

ReCiPe 2016 Life Cycle Impact Assessment (LCIA)

Scope
Phases
Assumptions
Scenarios

**Processes** 

Cradle to fate including all supply chain phases and stages depicted in Figure a. The LCA covered all known flows in all known stages cradle to end of life fate.

Use is to typical Australian wildlife conservation professional practice.

Use, cleaning, maintenance plus disposal and re-use were scenario-based using Facility Management Association denoted and published typical operations.

All known processes are included from resource acquisition, water, fuel & energy use, power generation & distribution, freight, refining, intermediates, manufacture, scrap re-use, packing and dispatch, installation, use, maintenance and landfill. All significant waste and emission flows from all supply chain operations used to make, pack and install the product are included.

Evah industry databases cover all known domestic and global scope 1 and 2 operations. They exclude scope 3 burdens from capital facilities, equipment churn, noise and dehydration as well as incidental activities and employee commuting. Electricity supply models in active databases are updated annually. As each project is modelled and new data is available the databases are updated. They are then audited by external Type 1 ecolabel certifiers. The databases exist in top zones of commercial global modelling and calculating engines. Quality control methods are applied to ensure:

- Coverage of place in time with all information for each dataset noted, checked and updated;
- Consistency to Evah guidelines for all process technology, transport and energy demand;
- Completeness of modeling based on in-house reports, literature and industry reviews;
- Plausibility in 2 way checks of LCI input and output flows of data checked for validity, plus
- Mathematical correctness of all calculations in mass and energy balance cross checks.

## **Data Sources Representativeness and Quality**

Primary data used for modelling the state of art of each operation includes all known process for:

- Technology sequences;
- Energy and water use;
- Landfill and effluent, plus

- Reliance on raw and recycled material;
- High and reduced process emissions;
- Freight and distribution systems.

Primary data is sourced from client annual reports and publications on corporate locations, logistics, technology use, market share, management systems, standards and commitment to improved environmental performance. Information on operations is also sourced from client:

- Supply chain mills, their technical manuals, corporate annual reports and sector experts, and
- Manufacturing specifications websites and factory site development license applications.

Background data is sourced from the International Energy Agency, IBISWorld, USGS Minerals, Franklin Associates, Plastics Europe, CML2, Simapro 9.5, EcoInvent 3.9 and NREL USLCI databases plus:

- Library, document, NPI and web searches, review papers, building manuals, and
- Global industry association and Government reports on best available technology (BAT).

For benchmarking, comparison and integrity checks inventory data is developed to represent BAT, business as usual and worst practice options with operations covering industry sector supply and infrastructure in Australia and overseas.

Such technology, performance and license conditions were modelled and evaluated across mining, farming, forestry, freight, infrastructure and manufacturing and building industry sectors since 1995.

As most sources do not provide estimates of accuracy, a pedigree matrix of uncertainty estimates to 95% confidence levels of Geometric Standard Deviation<sup>2</sup> ( $\sigma_g$ ) is used to define quality as on page 3.

No data set with >±30% uncertainty is used.

# **Supply Chain Modelling Assumptions**

Australian building sector rules and Evah assumptions applied are defined in Table b.

# **Table b Scope Boundaries Assumptions and Metadata**

Process Model It is typ Resource flows LCI use Temporal Project Geography Jurisdic Representation It repre Consistency All known	pical including Import and Export sical industry practice with currently most common or best (BAT) technology. The regional data for resource mapping, fuels, energy, electricity and logistics. The data collated over the previous 4 years represents averages over the last action is of the declared client, site, regional, national, Pacific Rim then Europe. The sents the declared client, their suppliers and energy providers to each cradle. The wind operations are modelled according to operations with closest proximity.

Consistency All know	· · · · · · · · · · · · · · · · · · ·
•	wn operations are modelled according to operations with closest proximity
T 1 1	will operations are modelled according to operations with closest proximity.
Technology Supply	chains modelled are typical of recent Pacific Rim technology & practice.
Functional Unit A 20 or	r 60 year period typical service life, use, cleaning & disposal/kg or m² applies.
System Control	
Primary Sources Client 8	& supplier mills, publications, websites, specifications & manuals are used.
Other Sources Recent	t IEA, GGT, Simapro, IBIS, EcoInvent sources used & cited in the LCA reports.
Data mix Power	grid and renewable shares are updated according to the latest IEA reports.
Operational Compa	any data is used for process performance, product share, waste & emissions.
Logistics Local d	lata is used for power, fuel mix, water supply, logistics share & capacity.
New Data Entry New da	ata is entered by current researchers at Malaika LCT, Evah and GGTI.
Data Generator All via	current manufacturers, Evah, GGTI, IBIS & others is cited & in LCA reports.
Data Publisher Publish	ners include the Evah Institute, GGTI and designated clients only.
Contributors All prof	essional and personal contributors are cited in Evah & GGTI records.
Data Flow & Mix	
System Boundary All know	wn resources & emissions are modelled from Earth cradles to end of life fate.
System flows All know	wn flows are modelled from & to air, land, water & community sources & sinks.
Capital inclusions Natura	I stocks $\Delta$ , industry stockpiles $\Delta$ , capital wear $\Delta$ , system losses and usage.
Arid Practice Dry tec	chnology adopted; Water use is factored by 0.1 as for e.g. mining.
Transportation Distance	ce >20% than EU; >20% fuel efficient larger vehicles, load & distance.
Industrial Compa	any or industry sector data for manufacturing and minerals involved.
Mining All raw	material extraction is based on Australian or Pacific Rim technology.
Imported fuel The fue	el mix is from nearest sources such as UAE, SE Asia, Canada or New Zealand.
Finishes Proces	sing inputs with finishing burdens are factored in otherwise that is denoted.
Validation	
	neration study is ± 5 to 15% uncertain due to some background data.
	nificant operations are tracked and documented from the cradle to grave.
	ng of >90% flows apply a 90:10 rule sequentially to 99.9% and beyond.
	located to co products on reaction stoichiometry by energetic or mass fraction.
	wn resource use from & emissions to community air land, water are included.
	s are checked and benchmarked against BAT, BAU & worst practice.
•	ated U is reported & compared to Bath U RICE & EcoInvent libraries.
· ·	s are versus Plastics Europe, Bath U RICE & or Industry LCA Literature.
